

Update the manuscript based upon the changes to the data files as listed below. In addition to adding new columns, the content has changed in most of the original data files.

Filename: [mse_by_domain.csv](#).

I have added the following columns:

Metric_std – This is the standard deviation for the metric (mean squared error) for each domain across simulations.

Filename: [auc_by_domain.csv](#)

I added the following columns:

Metric_std – This is the standard deviation for the metric (roc auc) for each domain across simulations.

Filename: [auc_by_label_method_by_domain.csv](#)

I added the following columns:

Metric_std – This is the standard deviation for the metric (roc auc) for each domain across simulations.

Filename: [auc_by_label_method_by_round.csv](#)

I added the following columns:

auc_std – This is the standard deviation for the metric (roc auc) for each domain across simulations.

Also, update the manuscript based on the discussion in the following reference:

[Protein language models are bad at mutational effect prediction](#)

Reorder the sections in the results section in the following order:

Protein Landscape Analysis: Position-Level Prediction vs. Assay Score Correspondence

Active Learning Achieves Competitive Performance Across Proteins

Domain-Level Classification Performance Reveals Structural Heterogeneity

Domain-Level Regression Performance (MSE)

Impact of Label Generation Strategy on Model Performance

Summary of Model Comparison
